Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **Three gestures execute without being asked, and none of them touches production.** Anything that can stop a service lives in a written, capped, dated mandate, withdrawable in one word.

The three automatic gestures

Gesture	Effect on production	Measured over the quarter
Sort and qualify alerts, with a written reason	None	8,320 alerts handled
Enrich a signal before presenting it	None	Qualification from 4 h 10 to 6 minutes
Freeze a log copy past the threshold set	None	14 sealed copies, 2 used

The quarter's mandates

Nature	Number	Measure
Containments	3	Scope named object by object
Collection activations	5	Read-only
Remediations touching a service	3	Window granted by operations
Median signature → execution	—	4 minutes
Rollback executed	1	80 seconds — reversibility has been used
Gestures outside a mandate's scope	0	Log, line by line

The standing mandate proposed

Element	Content proposed	Measured gain
Situations covered	Three, described by the CISO himself	—
Example situation	« A service account authenticates outside its machine list between 22:00 and 06:00 »	34 minutes saved on the quarter's night incident
Term	Set by the CISO	—
Withdrawal	In one word, at any moment	—

Three situations to be covered by the standing mandate: _____

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems at hand.
