Fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **There is no screen letting a manager see a result** — it is not a disabled permission, it is a screen that was never built.

Information	The learner	Their manager	The module's author	Summary
Their answers	**Yes**	**No**	**No**	**No**
The expected answers	**Yes**	**No**	**Yes**	**No**
The page of the material	**Yes**	**No**	**Yes**	**No**
That the training was completed, and its date	**Yes**	**Yes**	**No**	**As a count**
Questions that fail, as counts	**No**	**No**	**Yes**	**Yes**
Number of attempts	**Not kept**	**No**	**No**	**No**

Information	The learner	Their manager	The module's author	Summary
Time spent	**Not measured**	**No**	**No**	**No**

> **The moment a result reaches a manager, the learner answers what they think is expected rather than what they think.** The quiz then measures compliance, not understanding.

The figure that would not otherwise exist

Indicator	Value
Attempts	**236**
Questions reopened afterwards to reread the answer	**1,812**
That is, per attempt	**7.7**

A learner reopens seven questions after finishing because nothing is watching. It is the only learning behaviour this arrangement produces, and it would vanish the moment a manager was given a screen.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually

connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
