Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **No named result appears in this document** — failures are given per question, never per person.

#	Flag	What triggered it	At stake	Recipient	Chase
1	1 question failed by 71%	168 wrong of 236	The answer is not in the material	Whoever wrote the module	7 d
2	Module 4 against note of 19/05/2026	Two orders of steps	A procedure	Both authors together	48 h
3	34 completions on a changed version	Change of 12/02/2026	3 sections of 34	Training lead	7 d
4	41 employees beyond the frequency	Training plan	An organisation	Training lead, never the manager	7 d

The second flag goes to both authors together. Sent separately, each would have assumed the other was current — the commonest way a divergence survives being flagged.

Five guarantees that make your staff play along, and that is what makes the results worth using

What the agent rules out	Why
Report a result to a manager	The quiz stops being a learning tool
Grade or rank a learner	Same
Measure time spent	It measures reading speed
Flag a learner who fails	They would stop before the threshold
Teach what is not in the material	An invented answer is learned then passed on

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
