Fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **A complaint is settled on the page the customer read, not on today's.**

Item	Kept?	What it allows
Source of each characteristic and its date	Yes	Retracing the path to the supplier document
Supplier reference version at publication	Yes	Knowing what was true that day
Text published as it went out	Yes	Answering what the customer actually read
Characteristics not written and why	Yes	Filling the gaps in supplier data
Unpublishings and their reason	Yes	Evidencing responsiveness
Who read through, how many pages a day	No	Would measure people without serving the page

One exception, which is not one: **who approved a numeric claim**. A claim binds the company, and somebody must be able to answer for it.

What the trace has already shown

The **187 unsourced characteristics were not invented**: they were copied from an older text nobody could trace. **That mechanism repeats at every catalogue overhaul until the source is attached to the value.**

For the company to settle

Retention period for published versions: _____ years

How often supplier references are checked: _____ months

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
