Map of the six sources — what is indexed

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

1.9 million files, 6 sources, 0 content copied · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for the demonstration. **Indexing means reading the content of every document so it can be found by what it says, not by the file name or the folder it sits in.** Nothing is copied, nothing is moved, nothing is renamed: **Ventaline's current paths keep working exactly as before.**

The six connected sources

Source	Volume indexed	What the agent does there	What it never does
Intranet	12 years of pages and notes	Reads the content and the last-modified date	**Neither writes nor publishes**
File repository — sites	**1.24 million files**	Reads, dates, ties to the site	Neither renames nor moves
File repository — departments	410,000 files	Reads and dates	Deletes nothing

Source	Volume indexed	What the agent does there	What it never does
Design office document management	**238,000 revised documents**	Reads the revision and its issue status	**Changes no revision**
After-sales ticketing tool	94,000 tickets	Reads the thread and its attachments	Neither opens nor closes a ticket
Team messaging	**74,000 discussion threads**	Reads the connected team channels	**No direct message between individuals**
Total	**≈ 1.9 million files**	**Read-only**	**0 writes, 0 copies outside the index**

The gap measured over thirty days of access logs

Finding	Volume	What it costs
Information searches logged over the month	**2,900**	—
Searches re-run word for word on a second source within ten minutes	**1,276 — 44 %**	**A search re-run identically elsewhere is a search that did not succeed the first time**
Average duration of a successful search	**16 minutes**	Of which 60 % querying the sources one after another
Searches ending with a question put to a colleague	**35 %**	**The most expensive item: it costs twice, the person searching and the person interrupted**

The three items unified search shifts

LINDBERGH FORMATION — Blue Lemon Agent — Companies register (RCS) Évry 817 946 114 —
Legal notice (in French): bluelemonagent.ai/mentions-legales

Item	Today	With unified search	Change
Querying the sources one after another	**60 % of the time spent on a search**	**8 %**	**−52 points**
Tracing the original location and the version that governs	30 %	**4 %**	−26 points
Asking a colleague to find a document	35 %	**6 %**	−29 points
Duration of a successful search	**16 minutes**	**5 minutes**	**−11 minutes**

What the index contains, and it is the question an IT department always asks: what is needed to find a document where it is — its location, its date, the terms it carries. **It does not contain your documents.** A deleted index loses no file; that is what makes leaving possible in half a day.

> **Connection happens source by source, and each can be removed without touching the others.** Ventaline can start with the two file repositories and the intranet, measure for a month, then decide the rest on what it actually returned.

For Ventaline to settle

Connection order chosen by the head of information systems: _____

> **Request a demo with your own documents**
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
