Fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **Naming an out-of-period item to a manager would put it back in circulation at the exact moment it was meant to stop existing.**

Information	HR	Employee's manager	Monthly summary
Nine items out of period, as a count	**Yes**	**No**	**Yes**
The files concerned	**Yes**	**No**	**No**
The items' content	**No**	**No**	**No**
34 medical documents, as a count	**Yes**	**No**	**Yes**
Their precise nature	**No**	**No**	**No**
41 unsigned amendments	**Yes**	**No**	**Yes, as a count**

The question that gets the same answer for everyone

Question	Answer

"Has this employee ever been disciplined?"	**None**
By a search	**Not built**
By a count	**Not built**
By an "I cannot answer"	**No — it would already say too much**

The last row is the one that holds all the others up. A refusal issued case by case becomes an answer: people learn to tell the files the agent refuses on from the files it has nothing to refuse.

Request a demo with your own documents

This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
