Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **The agent says what moved and by how much. It advances no cause.**

#	Flag	On what	Recipient
1	+12 %, 9 points of it from a rule change	Invoicing entries	Whoever steers the scope
2	One indicator, three scopes, three figures	Three tables	Whoever owns the indicator
3	14 alert firings, 2 opens	Alert log	Whoever created the alert

What you keep the call on — and what the agent has already done for you

What stays your decision	What the agent brings you to decide with
--------------------------	--

Naming the cause of a variance	The variance arrives broken down: +12 %, 9 points of it from an invoicing rule change. Only 3 points are left for you to explain, and the cause lies with whoever knows the market
Opening an indicator per person	The agent produces it as soon as the company has opened it: written down, lawful and authorised. Until it is, the indicator would become a target and distort what it measures
Correcting a past forecast	It stays dated, beside the actual: the only way to know what your forecasts are worth, since a forecast corrected afterwards is always right
Setting an alert's threshold	What it produced, in figures — 14 firings for 2 opens — handed back to whoever created it: a threshold is set on measurements, and that is what stops a problem being silenced unseen

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
