Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **An allergy that is announced goes to the kitchen with the order, in its own slot: that is where it is confirmed, by the people who see the plate.**

#	Flag	On what	Recipient
1	**7 allergy notes missing from the production ticket**	**41 notes**	**Floor manager and ticket configuration**
2	**Item orderable 23 min after running out**	**14 stock-outs**	**Floor manager**
3	**31 totals raised after announcement**	**4,700 orders**	**Till configuration**
4	**23 dish sheets not reviewed in over 6 months**	**140 dish sheets**	**Menu owner**

What is already secured, and what it earns you

What is in place	What you gain
Every announced allergy is carried onto the production ticket and confirmed by the kitchen	**All 41 notes reach the people who can answer them — 7 did not, and that is the costliest risk of a service**
The price quoted is the system's price, to the cent	**A discount exists only if you decided it: the margin on the service is the one you set**
An order is announced as taken only once its transmission is confirmed	**No cover lost between the floor and the kitchen**
Every item is read back to the customer before it is recorded	**The order served is the order asked for: fewer returns to the kitchen, fewer dishes comped**
Suggestions come before the total is announced	**12% acceptance instead of 2% afterwards: average basket gained without lengthening the order**

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
