180 blocks · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **The agent does not know whether the library is still accurate — which is why it publishes its age rather than pretending.**

Item	Kept?	What it allows
Proposals sent and version of blocks used	Yes	Knowing where every sentence comes from
Source and date of every quantified claim	Yes	Defending a figure
Permissions to name a client, date and reach	Yes	Not naming without the right
Comparisons and their public sources	Yes	Holding art. L122-1
Age of every block in the library	Yes	Knowing what is being copied
Data on clients who did not sign	No	Beyond the proposal itself

The library's age

Finding	Value
Reusable blocks	180
Median age	2 years

A two-year-old block describing a lead time is the exact mechanism that carried **"up to 30 % savings" into 23 proposals**, when the figure came from a single project.

What the trace has already prevented

Defect	Volume	What it cost
Proposal sent with another client's name	2	The trade's most ordinary and most destructive defect
Client named with no traceable permission	41	A citation without the right
Named individual promised	9	A commitment nobody follows

For the company to settle

Age beyond which a block is reviewed: ____ months

Validity period of a permission to name a client: ____ months

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
