Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **The recipient learns two things, and the second is worse.**

That the proposal is a template, they already assumed and forgive. That their own name will travel the same way, they do not.

What the block gains you

The agent **flags and holds the proposal instead of correcting in silence: a remnant of a previous proposal almost always signals that the content went unread too.** The **2 proposals sent with the previous client's name** would not have gone out, and the salesperson would have re-read the rest. **You take the document back before it leaves**, instead of learning from the client that their name was not the right one.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
