Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **A rate computed on the last date rates the ability to reschedule, not the ability to deliver.**

The mechanism that makes the usual figure unusable

Finding on one task	Value
Reschedulings	**14**
Size of each postponement	**Never more than 5 days**
Lateness shown by the tool	**0**
Real lateness since the first date announced	**61 days**

The two calculation bases, compared

Basis	What it measures	How is it gamed?
Last rescheduled date	**The ability to reschedule**	**By rescheduling**

Basis	What it measures	How is it gamed?
First date announced	**The ability to deliver**	**By announcing wider**
Gap between first and last date	**The real slippage**	**It cannot be gamed**

> **Measured on the first date, the rate points at tasks and not only at people:** the most-postponed tasks cluster on **three external dependencies.**

The identical mechanism already seen elsewhere

Finding	Value	Why it lasts
Tasks showing 90 % for over six weeks	**23**	**The percentage is declared, and it costs nothing to stay there**

What is supplied to install the named level

Condition	Basis
Proportionality	**Art. L1121-1, Labour Code**
Prior information	**Art. L1222-4, Labour Code**
Works council consultation	**From 50 employees**

For the company to settle

Calculation basis chosen: _____

Works council consultation date: _____

---

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
