Silent sensors — 4 found, 5 drifts recovered

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

The figure the agent publishes about itself, and its fix · fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for the demonstration. **Across the 41 drifts in the history, the nine trend rules caught 35.** This attachment gives the exact cause of the other six, the fix as written, and the measured result after the fix.

The six missed drifts, and their common cause

Finding	Value	Reading
Drifts missed	**6 of 41**	**All on press 1**
Melt-pressure sensor frozen for more than 45 minutes	**340 times over 18 months**	**No rule can see movement in a value that does not move**
Reading	—	**It was not the press that was fine, it was the sensor that had gone quiet**

The written fix and its result, replayed across the same 18 months

Element	Content	Result

Silent-sensor rule	**Thirty consecutive strictly identical readings on a point that normally varies**	—
Missed drifts recovered	—	**5 of 6**
Further silent sensors found	Presses 2 and 4	**3, one quiet for seven months**
New count	—	**40 drifts caught out of 41, instead of 35**
False signals produced by this rule	—	**0 over 18 months**

The forty-first, and what catches it

Origin	What no press sensor sees	Where it is caught
Material batch outside specification	The drift arrived with the material	**Incoming material inspection, opened on the 4th**
Method	—	**Every supplier batch certificate compared with the purchasing specifications**
Result over three weeks	—	**2 batches set aside before entering production**

Proposed signing order: the silent-sensor rule first, ahead of the other nine. **Zero false signals, four sensors already found, and it makes the other eight rules dependable.**

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
