Technical framework — where your monitoring scopes live

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Local inference, summary log, processing in the EU targeted · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for the demonstration. **It describes the architecture actually offered.** A company's monitoring scopes are the map of its strategy: the competitors it follows, the range it is hunting signals on, the texts it is anticipating. **Entrusting that list to a consumer service is publishing its roadmap.**

The two deployment modes, at the company's choice

Mode	Where the computation happens	What leaves the network	For whom
Local inference	**On a company server**	**Nothing**	Companies already running an internal server

Mode	Where the computation happens	What leaves the network	For whom
Isolated resource	On a dedicated server hosted in France, under French law	**Nothing outside the European Union**	Companies preferring not to run a server

In both cases the resource is dedicated. No pooling with another company in the sector: **your monitoring scopes, your subjects and your summaries live in an environment that is yours alone, and train no model.**

What is logged, and what the log allows

Data logged	What it lets you show
What was kept, with source and date	How a piece of information reached the decision
What was discarded, and why	**That the filtering is set and checkable, not arbitrary**
Who approved and when	That nothing circulated without a named approval
Where the information went	**How the regulatory monitoring is run — useful in a bid**

The three tenders detected this quarter

Tender	Detection	Outcome	Lesson
Hygiene product supply, local authority	At publication	**Answered and won**	3 weeks of preparation
Hygiene product supply, local authority	**Seen 4 days before the deadline**	Not answered	**Detection at publication changes everything**

LINDBERGH FORMATION — Blue Lemon Agent — Companies register (RCS) Évry 817 946 114 —
Legal notice (in French): bluelemonagent.ai/mentions-legales

Tender	Detection	Outcome	Lesson
Framework agreement, food industry	Seen 4 days before the deadline	Not answered	**Carried a “data hosted in France” criterion scored out of 5**

What the architecture lets you document in a bid

Requirement encountered	Answer given
Data hosted in France	**Local inference or isolated resource under French law, documented in writing**
Deployment objective: processing and access within the European Union	No transfer, including against an American host based in Europe
Reduced extraterritorial exposure and FISA 702	Architecture designed to reduce exposure to those statutes
Traceability of regulatory monitoring	Complete log of summaries, approvals and sends

> **The agent files no bid** and does not decide whether to answer a tender. It detects, dates, connects with what the monitoring already knows about the competitors likely to bid, **and leaves the decision to sales management.**

For the company to decide

Deployment mode chosen (local inference / isolated resource): _____

Retention period for the summary log: _____

---

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
