Protection pre-assessment: one file worked through under both hypotheses

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

2.8% override measured on 4,180 files · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for the demonstration. The files, rates and measurements are invented.

What was measured, and on what

Measurement	Value	Period	Source
Files pre-assessed	4,180	Six months	Pre-assessment tool logs
Files rerouted by a handler after the proposal	118	Six months	Pre-assessment tool logs
Human override rate	**2.8%**	Six months	Calculated from the two lines above
Member files for sick leave per year	≈ 11,000	Twelve months	Benefits division declaration

> **A 2.8% rate reads two opposite ways**, and the agent does not choose for you: either the tool proposes well, or the human override is no longer genuinely exercised. Both produce the same number.

The sector benchmark, given as indicative

On comparable assessment chains, published override rates most often sit **between 5% and 15%**. That is an order of magnitude, not a standard, and it is not a conclusion about your case: your files may be more uniform. **The only benchmark that binds you is your own history.**

The test that settles it, in two weeks

What is recorded	On what	What it tells you
Time between the proposal being shown and approval	Every file pre-assessed over two weeks	Under a few seconds, the override is formal; beyond, it is real
Share of files opened in full by the handler	Same sample	Separates review from approval by default

The two qualifications worked through

Hypothesis	Proposed qualification	What it entails
The tool proposes, the handler genuinely arbitrates	General regime, with a duty to demonstrate the override	Traceability of the override, training for handlers
The tool conditions access to the benefit in practice	To be assessed for its effects on people	Full file, demonstrable human oversight, information to the member

Hypothesis adopted _____ · after a test run from _____ to _____ · signed by _____

---

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
