Technical framework — where nationals' data lives, and how you leave

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114
Document issued on 09/11/2026

Local inference, read-only, processing in the EU targeted · fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for the demonstration. **It describes the architecture actually offered.** A consular post handles identities, travel documents, family situations and visa files: **this is sovereign data, and the post is its custodian.**

The two deployment modes, at the post's choice

Mode	Where the computing happens	What leaves the network	For whom
Local inference	**On a machine inside the consulate**	**Nothing**	Posts that already have a server
Isolated resource	On a dedicated server hosted in France, under French law	**Nothing outside the European Union**	Posts that would rather not run a machine

Local inference means the model computes on your own machine: the text of a civil-status record or of a visa file crosses no outside network to be processed. **In both cases the resource is dedicated to San Ventura: no pooling with any other post** — that is the condition of file confidentiality.

What protects nationals' data

Point	Implementation	What the post can write to a national
Training	**No national's data feeds any model, neither ours nor a third party's**	« Your data trains no system »
Write rights	**The technical read account has no right to write**	« The tool cannot alter any record, technically »
Encryption	In transit and at rest	« A stolen drive stays unreadable »
Role-based access	**Rights follow the job**: the reception officer does not open visa files, the visa officer does not open civil-status records — **6 roles for 11 staff**	« Each official sees only what their duties require »
Logging	Who asked for what, when, and what the system produced — **0 out-of-role access since go-live**	« Every output is traceable »
Hosting	**France, under French law**, architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity, including against a US player hosting inside Europe	« Deployment objective: processing and access within the European Union »

The acts reserved for an authorised public official — and what the agent brings to each

LINDBERGH FORMATION — Blue Lemon Agent — Companies register (RCS) Évry 817 946 114 —
Legal notice (in French): bluelemonagent.ai/mentions-legales

Reserved act	Who it belongs to	What the agent has already done on arrival
Deciding on a visa application	**The post's authorised official**	**Complete file, documents checked one by one, applicant's chronology reconstructed, two draft letters written — the decision takes 6 minutes instead of 22**
Drawing up and signing a civil-status record	**The post's authorised official**	**Draft transcription built on the post's templates, point-by-point checking note — 10 minutes instead of 50**
Issuing a travel document or a passport	**The post's authorised official**	**Completeness checked before the journey, documents verified from photos, appointment booked with the exact list**
Entering a marginal note on a record	**The authorised official, after the chancery officer's sign-off**	**Notice matched to its record the same day, exact wording proposed — 23 notes found and entered in one morning**
Sending a reply outside the 14 subjects	**The post**	**Draft written, sourced, in both forms — handed over within 4 hours**

This division is not a limit, it is what gives the post's acts their value: a decision taken by an authorised public official is reasoned, traced and open to challenge. **A record nobody had signed could be challenged by nobody, and would be worth nothing.**

The way out — checkable before committing, not after

Item	What becomes of it on the day you stop	What stays with the post
The index	**Deleted**	**The nine years of files have not moved by a single byte** — same files, same rights

LINDBERGH FORMATION — Blue Lemon Agent — Companies register (RCS) Évry 817 946 114 —
Legal notice (in French): bluelemonagent.ai/mentions-legales

Item	What becomes of it on the day you stop	What stays with the post
The log of requests and outputs	Handed over in an open format, or destroyed	**The post chooses, and the question is settled at go-live**
The 22 information sheets rewritten in plain language	Already in the post's files	**They are made of its own material: they belong to it**
The 14 standard replies and their 112 versions	Exported in a format readable without us	**Usable at the counter, on the phone and on the website**
The 180-term glossary and the 13 case sheets	Handed to the chancery officer	**The asset the year will have created**
The subscription	**Annual, with no tacit renewal**	**It is renewal that requires a decision, not termination**

> **A dry-run exit is offered at the end of the first quarter**, half a day: we switch off, we check that the post works exactly as before, we switch back on. **The head of post will know what the commitment is worth before having committed a second year.**

To be set by the post

Deployment mode chosen (local inference / isolated resource): _____

> **Request a demo with your own documents**
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
