Technical framework — where traders' data lives

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114
Document issued on 09/11/2026

Local inference, read-only, processing in the EU targeted · fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for the demonstration. **It describes the architecture actually offered.** A customs office handles invoices, contracts and trade flows: **this is data companies entrust to the administration, it does not belong to it.**

The two deployment modes, at the service's choice

Mode	Where computing happens	What leaves the network	For whom
Local inference	**On a machine in the office**	**Nothing**	Services that already have a server
Isolated resource	On a dedicated server hosted in France, under French law	**Nothing outside the European Union**	Services that would rather not run a machine

Local inference means the model computes on your machine: a company's invoice or the body of a declaration crosses no outside network to be processed. **In both cases the resource is dedicated to the office: no pooling with any other service** — that is the condition for the continuity of yours.

What protects companies' data

Point	Implementation	What the office can write to a company that asks
Training	**No commercial data feeds any model, neither ours nor a third party's**	“Your data trains no system”
Write rights	**The read-only technical account has no right to write**	“The tool cannot alter any declaration, technically”
Encryption	In transit and at rest	“A stolen medium stays unreadable”
Role-based access	**5 roles for 22 officers; information staff do not open control files, and the reverse holds too**	“Each officer sees only what the job requires”
Logging	Who asked what, when, what was produced and who approved it	“Every output is traceable”
Hosting	**France, under French law**, architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity	“Deployment objective: processing and access within the European Union”

The remit, written and closed

Function	Present?	Detail

Legal notice (in French): bluelemonagent.ai/mentions-legales

Documentary matching — declaration, documents, goods as described	**Yes**	**This is the heart of the service provided**
Score, rating or ranking of a company or a person	**No**	**Outside the contractual remit, and the remit does not unlock**
Behaviour prediction, targeting, surveillance	**No**	**No function of this kind is delivered or can be switched on**
Decision to check, to reassess or to detain	**No**	**It belongs to the sworn customs officer, who receives it within minutes, file complete and reasoned**

> **The digital-assistant announcement is made in the first sentence, to every trader.** It is not an option that can be switched off: the European regulation on artificial intelligence requires that anyone interacting with an AI system be informed, **and the caller may ask for an officer at any moment.**

To be settled by the service

Deployment mode chosen (local inference / isolated resource): _____

> **Request a demo with your own documents**
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the
