What the agent does alone, and what is logged

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

3 reversible acts, 4 decisions that stay with a person · fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for the demonstration. **Three acts, not one more, and each is withdrawn with a single word.** Everything else waits for a request. **This is the page to hand to whoever asks.**

The three acts

Act	Rhythm	The reverse holds too	Withdrawal
Watch on the designated official sources and writing of the updated version	**Every night, delivered within 24 hours**	**An evolution that is reversed brings the sheet back to its previous version, flagged in the same way**	With one word

Act	Rhythm	The reverse holds too	Withdrawal
Indexing of the answers and decisions filed	**Continuously**	**A document withdrawn from a file disappears from the index at the same hour — no copy of what the service decided to erase**	With one word
Previous day's record to the unit head	**Every morning**	**It goes to him alone, and carries no score on any company**	With one word

The four decisions that stay with a person — and what the agent brings to each

Decision	Whose it is	What the agent has already done when it arrives
Checking, reassessing or detaining goods	**The sworn customs officer**	**Complete file, chronology rebuilt, documents matched, discrepancy reasoned — handed over within minutes**
Settling the classification of goods	**The customs officer**	**The description quoted, the classification declared, the office's comparable decisions and what is missing to decide**
Sending anything outside the mandate's fourteen subjects	**A public officer**	**The draft answer already written, sourced and dated**
Answering on an individual file in progress	**A public officer**	**The answer drafted within four hours, with the file's documents alongside — it goes out from the service, which makes it reasoned and open to challenge**

The indicator advised against, and why — mechanical, not moral

Indicator	Produced?	Reason
Number of discrepancies found per officer	**No**	**Once tracked it becomes a target: discrepancies get reported for the counter, and the check stops measuring files and starts measuring the reaction to the counter**
Discrepancy counter per trader	**No**	**It would become a score, and a score cannot be reasoned before the one who challenges it**
Discrepancies by nature and by document	**Yes**	**It says where to focus documentary effort, without putting a name on it**
Deadlines met and missed, recurring subjects	**Yes**	**This quarter: questions on proofs of origin rose by a third after a change of forms**

The log — what is recorded

Item	Recorded?	Detail
Request received and channel	**Yes**	Time-stamped
Output prepared and its source	**Yes**	Office sheet or official source, with the date it was read
Approval	**Yes**	**Who approved, when, and what was corrected**
Content of companies' declarations and documents	**No**	**It stays where it is — the index does not copy it**
Readers of the log	**The unit head and the head of office**	**Retention period set by the service**

> **The log serves to answer a company asking what the service holds on its case**, and to prove, in the event of a challenge, who approved what. **It is evidence**

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
