Fourteen crashes, eleven tied to a model

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Quarter · fictional document

Fictional document — demonstration example
This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **A crash report often contains the screen's contents at the moment of the incident** — a basket, a half-filled form, sometimes a message.

Cause identified	Crashes	Resolved
Tied to a device model	**7**	**7**
Tied to a system version	**4**	**4**
Not reproduced	**3**	**0**

The three unreproduced go back out with the three data points that will make them speak — system version, connection state, last action before the screen, with no screen contents at all. **They fit in a minor release and tell you within a fortnight whether the crash is still there and what it lands on.**

What the agent looks at, and does not

Source	Consulted?	Why
Crashes aggregated by version and model	**Yes**	**Enough in 11 cases of 14**
A user's execution logs	**No**	**—**
Named crash report	**No**	**It contains the screen**
Individual usage data	**No**	**—**

The rule: reproduce before fixing

Action	Done?	Why
Propose a fix for an unreproduced crash	**No**	**It would pass tests and fix nothing**

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
