Seven contradictions, sixty-one answers

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **A smoothed answer is more dangerous than two contradictory ones**: it removes the reader's most useful piece of information, that the question is unsettled.

Pair	Subject	Answers served	Known before?
1	A procedure's deadline	**18**	**No**
2	An approval threshold	**14**	**No**
3	The order of two steps	**9**	**No**
4	Who a request goes to	**7**	**No**
5	A document to attach	**6**	**No**
6	A retention period	**4**	**No**
7	A rule's scope	**3**	**No**
Total	**—**	**61**	**0 of 7**

> **None of the seven was known.** A contradiction in a base never announces itself: both documents work perfectly, separately.

Why "the more recent" is not the rule

Situation	What "more recent" would produce
A note addresses a special case	**It would replace the general rule**
An old document is the reference	**It would be set aside**
A document resaved without change	**It would gain priority without changing a word**

What the agent answers

"*Two documents answer your question and they do not say the same thing. Here are both passages.*"

Element	Provided?
Both passages	**Yes**
Both titles	**Yes**
Both dates	**Yes**
A reconciled answer	**No**
A preference	**No**

> **Request a demo with your own documents**
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
