Technical framework — where your visuals and briefs live

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Local inference, role-based access, processing in the EU targeted · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for the demonstration. **It describes the architecture actually offered.** An in-house studio handles unlaunched campaigns, unannounced prices and the confidential visuals of its partner brands: the most sensitive data a retailer holds ahead of its own announcements.

The two deployment modes, at the company's choice

Mode	Where the computation happens	What leaves the network	For whom
Local inference	**On a machine at head office**	**Nothing**	Companies already running their own file server
Isolated resource	On a dedicated server hosted in France, under French law	**Nothing outside the European Union**	Companies that prefer not to run a machine

In both cases the resource is dedicated to your company. No pooling with another retailer or another brand: your guidelines, briefs, unpublished visuals and partner data live in an environment that is yours alone.

What protects your creative work and your partners'

Point	Implementation	What it lets you tell a partner brand
Ownership of the work	**Your visuals and briefs train no public model**	**“What the agent produces stays our property and yours — nothing is reused elsewhere.”**
Encryption	In transit and at rest	“An unpublished visual is readable by nobody outside the authorised team.”
Role-based access	**Rights follow the job** — the apprentice opens social templates, not co-branding contracts	“The number of people with access to your launch is named, and it is short.”
Logging	Who asked for what, when, what was approved and by whom	**“We can produce the access log for your campaign.”**
Location	France, under French law	**“Architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity, including against an American host based in Europe.”**
Human oversight	No automatic publishing; logged approval by the art director	“No visual went out without a person approving it, and that is checkable.”

What the agent plugs into — and what it does not replace

Tool in place	What the agent does there	What changes for the team
Creative suite	Reads the templates, produces adaptations in the expected formats	**Nothing: files open exactly as before**
Image library	Indexes content, keeps the rights register	No renaming, no moving
Social scheduler	Drops in ready posts, **schedules nothing**	Scheduling remains a human act
Ad accounts	Builds ads and audiences, **activates nothing**	Activation stays a decision of the communication manager
Approval space	Files proofs, chases late approvers	The existing approval circuit is kept
CRM	Keeps the state of creative jobs and partner budgets	No more double entry

What it has already brought commercially

Requirement encountered	Origin	Answer given
Unreleased visuals not leaving the European Union	**2 co-branding contracts out of 2**	**Met, with the technical sheet as evidence**
Hosting and subcontractors declared	Buying-group listing	**Criterion scored out of 5 — ticked without reservation**
Marking of model-produced images	Co-branding contracts + European AI regulation	Provenance note written into every file's metadata

> **To re-check at deployment:** the timetable for the European artificial intelligence regulation has already been amended once. The marking obligations are implemented here **because your partners ask for them**, without waiting for the regulatory deadline.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
