Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **It is the only defect that is not fixed by fixing the code.**

Nature of the key	Detections	Branch blocked
Production key	**1**	**Yes**
Test key	**3**	**Yes**

The agent does not tell the difference, because a test key in a repository looks exactly like a production key. And because a repository containing test keys teaches its contributors that the repository contains keys.

Why a secret is not a bug

Defect	Fixed by	Remains after fixing?
Bug	**A patch**	**No**

Defect	Fixed by	Remains after fixing?
Pushed key	**Nothing that is a patch**	**Yes — history and copies**

What the team keeps in hand — and why your production is what gains

Action	Done?	Why
Remove the key	**No**	**It stays in the history**
Rewrite the history	**No**	**It breaks everybody else's copies**
Revoke the key	**No**	**It can stop production**

What is supplied to decide

Element	Supplied?
The file and the line	**Yes**
The time of the push	**Yes**
The list of what must be decided	**Yes — revoke, reissue, purge, inform**

> **Request a demo with your own documents**
>
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
