

Forty remarks, then four point six

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 24/09/2026

Fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **All correct, all of no interest** — and that is precisely what made them harmful.

Period	Remarks per review	Style share	Handling rate
Before the formatter	40	89%	34%
After	4.6	0%	81%

The handling rate did not triple because the remarks are better, but because there are eight times fewer. Four remarks among thirty-six get handled at the speed of the thirty-six.

The four kinds of noise taken out of the thread — 40 remarks per review down to 4.6, and 81% handled

Subject	Flagged?	Why
---------	----------	-----

Spacing, line breaks	No	A tool fixes it
Import order	No	Same
Automated naming conventions	No	Same
Praise about style	No	It is noise too

The general rule that follows

If a tool does it, it is not the agent's job — and two opinions on the same thing are no better than one.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
