Technical framework — where contributor data lives

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Local inference, read-only, processing in the EU targeted · fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for the demonstration. **It describes the architecture actually proposed**: a collection body holds the balances, the returns and the financial difficulties of 34,200 companies — among the most sensitive data an administration handles.

The two deployment modes, at the body's choice

Mode	Where computation happens	What leaves the network	For whom
Local inference	**On a machine belonging to the body**	**Nothing**	Bodies already hosting their own servers
Isolated resource	Dedicated server hosted in France	**Nothing outside the European Union**	Bodies that prefer not to administer a machine

In both cases the resource is dedicated to your body. No pooling with another fund: that is the condition of your service's continuity as much as of the confidentiality of the accounts.

What protects contributor data

Point	Implementation	What it lets you tell a contributor
Training	**No contributor data feeds a public model**	“What we know about you serves your file”
Write permissions	**The technical account reads, it does not write — checkable with one command**	“No entry was made by the machine”
Encryption	In transit and at rest	“A stolen file stays unreadable”
Role-based access	**The telephone platform sees the state of an account, not the material behind a waiver request; enforced collection sees its own files, not those of amicable collection**	“Only the officers concerned see your file”
Logging	Who asked what, when, and what was produced	“We can retrace how your file was handled”
Hosting	**France, under French law**, architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity	“Your data is processed within the European Union in the architecture chosen”

What the agent plugs into — with no migration

Tool already in place	What the agent does there	What changes for the staff
Account management software	**Reads balances, returns and allocations**	Nothing: no entry, no setting changed

Tool already in place	What the agent does there	What changes for the staff
Telephone platform	Answers on the 14 subjects, transfers the rest	**The call arrives with the subject already noted**
E-mail and letters	Sorts, reclassifies, prepares the drafts	**Every dispatch stays approved by a caseworker**
9 years of filed correspondence	Indexes the content	**No renaming, no moving**

The year's framework measures

Indicator	Year
Contributor records out of the body's network	**0 across 128,000 enquiries**
Transfers outside the European Union	**0**
Out-of-role accesses recorded in the log	**0**
Outputs sent without a person's approval	**0 out of 8,000**

> **This document is the record your data protection officer and your supervising authority will ask for** — hosting, data processed, retention periods, who has access to what. It is asked for once a year and takes three days to reconstruct; it is kept up to date continuously.

To be settled by the body

Deployment mode chosen (local inference / isolated resource): _____

---

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
