What the agent does alone, and the dry-run exit

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Three actions, four signatures, half a day · fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for the demonstration. **Three automatic actions, not one more, each withdrawable with a word** — and a reversibility that is checked before signing a second year, not after.

The three automatic actions

Action	What it does	Its reversibility
Matching before each run	**Holds the reminder back when the instalment is settled**	**A wrong hold surfaces in the Monday check — 6 cases over 12 months, caught within 8 days**
Acknowledgement within the hour	What the document is, what it settles, what is missing	**Grants nothing and commits nothing — “did you receive it?” chasers: 340 → 41 a month**

Action	What it does	Its reversibility
Monday record to the service	Holds, documents outstanding, requests falling due, missed instalments	**The only unprompted dispatch, and it goes only to the service**

The four signatures that stay with an officer

Act	What the signature brings
Granting time to pay	**A reasoned, dated decision, enforceable**
Granting a waiver	A collective decision, comparable to the earlier ones
Starting enforced collection	**The service's heaviest act stays the most human**
Any adverse decision	**Challengeable — therefore the contributor has been heard**
Over two quarters	**8,000 outputs, 8,000 approvals by a person**

The exit, point by point

Element	What becomes of it	Whose it is
The index	**Deleted — it held no entries, only what is needed to find them**	—
9 years of accounts and correspondence	**Have not moved a byte — same software, same permissions**	The body
14 answers, updated templates, matching rule, waiver grid	**Stay in the body's files, readable without us**	**The body**

LINDBERGH FORMATION — Blue Lemon Agent — Companies register (RCS) Évry 817 946 114 —
Legal notice (in French): bluelemonagent.ai/mentions-legales

Element	What becomes of it	Whose it is
Production log	Handed over in an open format, or destroyed	**The choice is settled at go-live, not on departure**

No migration on the way in, therefore none on the way out. The management software is not replaced, no format belongs to us, and no officer has changed how they work other than reading instead of writing.

The dry-run exit

Parameter	Value proposed
Timing	**End of the first quarter**
Duration	Half a day: switch off, check, switch back on
Least costly date	**The third Wednesday of the month — the quietest day between two due dates, on your own records**
Protocol	Written, one page

> **Management will know what the promise is worth before committing a second year.** It is the only way to check a reversibility: to do it.

To be settled by the body

Date chosen for the dry-run exit: _____

> **Request a demo with your own documents**
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
