Technical framework — where applicant data lives

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Local inference, role-based access, processing in the EU targeted · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for the demonstration. **It describes the architecture actually proposed**: an assessment department handles association accounts, tax assessments, quotations and personal circumstances.

The two deployment modes, at the authority's choice

Mode	Where the computing happens	What leaves the network	For whom
Local inference	**On a machine of the authority**	**Nothing**	Authorities that already host their servers
Isolated resource	On a dedicated server hosted in France	**Nothing outside the European Union**	Authorities that would rather not run a machine

What protects applicant data

Point	Implementation	What it lets you answer
Training	**No applicant data feeds a public model**	“Your file serves your file only”
Technical account rights	**Read-only — the account the agent reads through has no right to write**	**“This is verified with one command”**
Encryption	In transit and at rest	“A stolen file stays unreadable”
Role-based access	**6 roles for 34 staff**: reception sees progress, not the financial documents; controls see the documents, not the reception exchanges	“Only the officers concerned see your file”
Logging	Who asked what, when, and what the system produced	**“It is that log which answers the public accountant as well as an applicant who challenges a decision”**
Hosting	**France, under French law**, architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity	“Your data is processed within the European Union in the architecture chosen”

The year's measurements

Indicator	Year
Applicant data out of the network	**0** across 6,400 applications
Transfers outside the European Union	**0**
Out-of-role accesses in the log	**0**
Grants awarded, refused or withdrawn without the competent official's signature	**0**

What the agent plugs into — with no migration

Tool already in place	What the agent does there	What changes for staff
Online filing platform	**Checks completeness at filing, guides the applicant**	The platform stays the authority's
Assessment software	Reads file status and declared values	Nothing: no writing, no change of screen
Document management system	**Indexes the content of the documents**	**No renaming, no moving**
Letter templates	Builds draft awards, refusals and requests for documents	**The signature stays with the public official**

Reversibility, verifiable before the vote

Item	The day the authority stops
The agent's indexes	**Deleted — they contained no file**
The authority's files	**Unchanged**: same files, same rights
Log of requests and outputs	Handed over in an open format, **or destroyed — the authority chooses at go-live**
21 restored and dated rulebooks, 13 answers, easy-read versions, rewritten checks	**Stay with the urban community, readable without us**
Migration	**None on the way in, therefore none on the way out**

> **A dry-run exit is proposed at the end of the first quarter**: half a day, we switch off, we check that the department assesses exactly as before, we switch back on. **The**

council knows what the promise is worth before committing to a second year.

For the department to settle

Deployment mode chosen (local inference / isolated resource): _____

Request a demo with your own documents

This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
