Technical framework — where planning files live

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Local inference, read-only, processing in the EU targeted · fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for the demonstration. **It describes the architecture actually proposed**: an assessment service handles plans, addresses, applicants' names and sometimes family situations — data that belongs to the public service and that bears on rights.

The two deployment modes, at the service's choice

Mode	Where computing happens	What leaves the network	For whom
Local inference	**On a machine of the service**	**Nothing**	Services that already host their servers
Isolated resource	On a dedicated server hosted in France	**Nothing outside the European Union**	Services that would rather not administer a machine

In both cases the resource is dedicated to your service. No pooling with another assessment service: your files, your rulebooks and your history live in an environment that is yours alone.

What protects the files' data

Point	Implementation	What it lets you write in your register
Training	**No file document feeds a public model**	“What the system reads of a file serves that file”
Technical account permissions	**Read-only — write access is not granted**	**“Verifiable with one command”**
Encryption	In transit and at rest, strong authentication	“A stolen file stays unreadable”
Role-based access	**5 roles for 6 staff** — the front-desk assistant opens filing schedules, not the opinions of consulted bodies	**“0 out-of-role access since go-live”**
Logging	Which file, when, against which article of the rulebook	**“We can tell an applicant how their file was examined”**
Hosting	**France, under French law**, architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity	“Deployment objective: processing and access within the European Union”

Decisions on rights, and the route that renders the same service

The act reserved for signature	What applies	What the agent does instead

Taking the decision to grant or refuse	**A decision producing legal effects on a person cannot rest on automated processing alone**	**The fully reasoned draft decision, article by article, handed over in 4 minutes — the officer and the mayor read and sign**

It is that signature that makes the decision challengeable before the administrative court, therefore defensible: a decision nobody had signed could be challenged by nobody, and would be worth nothing.

What the agent plugs into — with no migration

Tool already in place	What the agent does there	What changes for the service
Assessment software	Reads files, calculates due dates, prepares notes	**No change of software**
Online filing platform	Checks documents on filing, guides the applicant	**The filing remains the applicant's**
Document management system	**Indexes the content of the 9,840 files**	**No renaming, no moving**
Planning documents	Indexes the 31 rulebooks and their resolutions	The documents remain the municipalities'

Reversibility, verifiable before committing

On exit	What happens to it
Index	Deleted — **it contained no document, only the means of finding them**
Analysis log	**Handed over in an open format, or destroyed — at the service's choice**

On exit	What happens to it
31 indexed rulebooks, reasoning template, 12 applicant answers, 6 inconsistency checks, grant grids	**Stay with the service, in its files, readable without us**
Subscription	**Annual, with no tacit renewal — it is renewal that requires a decision, not termination**
Performance	**Established on items measured in your own assessment software: files handled, deadlines met, notes produced**

> **A dry-run exit is offered at the end of the first quarter:** half a day, we switch off, we check that the service assesses as before, we switch back on. **The mayors know what the promise is worth before committing a second year.**

For the service to settle

Deployment mode retained (local inference / isolated resource): _____

> **Request a demo with your own documents**
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.
> https://bluelemonagent.ai/en/secteur-public/metiers/agent-ia-instructeur-urbanisme

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
