Technical framework — where revenue office data lives, and how you get out

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Local inference, read-only, no access to the money · fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for the demonstration. **It describes the architecture actually proposed.** A revenue office handles family names, means-tested bands and payments: **personal and financial data the municipality holds without owning it.**

The two deployment modes, at the authority's choice

Mode	Where the computation happens	What leaves the network	For whom
Local inference	**On a machine at the town hall**	**Nothing**	Municipalities that already run a server
Isolated resource	On a dedicated server hosted in France, under French law	**Nothing outside the European Union**	Municipalities that would rather not administer a machine

Local inference means the model computes on your own machine: a family's name or their means-tested band crosses no external network to be processed. **In both cases the resource is dedicated to Marnoy: no pooling with another authority** — that is the condition for the continuity of the revenue offices.

What protects the families' data

Point	Implementation	What the municipality can write to a family that asks
Training	**No family data feeds any model, neither ours nor a third party's**	“Your data trains no system”
Write permissions	**The read-only technical account has no right to write, neither in the receipt book nor in the billing software**	**“The tool cannot alter any receipt, technically”**
Access to the money	**None, and no technical means of obtaining it**	**“Taking the payment is the revenue manager's act, and his alone”**
Encryption	In transit and at rest	“A stolen medium stays unreadable”
Role-based access	**Rights follow the job**: a deputy opens the office he runs, not the other three	**“3 roles for 3 authorised staff, 0 out-of-role accesses in the log”**
Hosting	**France, under French law**, architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity	“Deployment objective: processing and access within the European Union”

The acts reserved to a person — and what the agent brings for each

LINDBERGH FORMATION — Blue Lemon Agent — Companies register (RCS) Évry 817 946 114 —
Legal notice (in French): bluelemonagent.ai/mentions-legales

Reserved act	Whom it belongs to	What the agent has already done when it arrives
Taking the payment and handling the money	**The revenue manager, and him alone**	**The expected total by means of payment, calculated before the count**
Issuing the receipt	**The revenue manager — it is the receipt that is enforceable against the payer**	**The receipt prepared, numbered in the continuous sequence and matched to the invoice**
Receiving the remittance and checking it	**The public accountant**	**The complete slip, documents in the expected order — 0 further document requested over the quarter**
Waiver, write-off	**The council or the accountant depending on the case**	**The measured, documented file, ready to present**

What the agent brings the revenue manager is not lighter responsibility: it is what makes it bearable. An exhaustive, dated and enforceable check across 18,400 payments replaces a spot check made at the end of the day — and **the log can be produced, where only good faith could be invoked.**

The exit — verifiable before deliberating, not after

Element	What it becomes on the day you stop	What stays with the municipality
The index	**Deleted**	**The five financial years of receipt books have not moved by a single byte**

LINDBERGH FORMATION — Blue Lemon Agent — Companies register (RCS) Évry 817 946 114 —
Legal notice (in French): bluelemonagent.ai/mentions-legales

Element	What it becomes on the day you stop	What stays with the municipality
The log of reconciliations and discrepancies	Handed over in an open format, or destroyed	**Keeping it is recommended: it is the revenue manager's discharge file**
The four checks, the allocation rule, the record-keeping note for the offices	Already in your files	**They are made of the municipality's own material: they belong to it**
The 9 answers to users, the reminder templates, the portal fault report	Exported in a format readable without us	Usable as they are
The subscription	**Annual, no tacit renewal, within the direct-award thresholds**	**Renewal takes a council decision, stopping does not**

> **A dry-run exit is proposed at the end of the first quarter**, half a day: we switch off, we run an operating day exactly as before, we switch back on. **The council will know what the promise is worth before committing to a second year.**

For the authority to settle

Deployment mode chosen (local inference / isolated resource): _____

> **Request a demo with your own documents**
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local

Legal notice (in French): bluelemonagent.ai/mentions-legales

execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
