

Fourteen overdue checks — no health data

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 24/09/2026

Fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **The agent sees a date and a name, nothing else.** That is what allows this tracking to exist without any health data circulating.

Overdue by	Employees
Under 3 months	7
3 to 6 months	4
More than 6 months	3
Total	14

What the agent relies on, and what it does not determine

Element	Seen by the agent?	Why
---------	--------------------	-----

The date recorded in the tracking	Yes	It is your own data
The employee's name	Yes	So HR knows who to call in
The applicable frequency	No	Depends on the post and individual monitoring
The fitness opinion	No	Health data
Restrictions	No	Health data
The reason for enhanced monitoring	No	Health data

If the recorded date is wrong, it is the tracking that needs correcting, not the flag. The agent determines no frequency: it compares a date with today.

What is proposed

When	Flag	Recipient
30 days before the date	Appointment to arrange	HR lead
On the date	Reminder	HR lead
After the date	As one list, not one at a time	HR lead

The thirty-day flag is the only useful one: after the date only a finding remains, and fourteen individual findings produce fourteen ignored notifications.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
