Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **It is a mechanical check, not a judgement of style**: each function's return was replaced with a constant value, and all 41 tests still pass.

What the test checks	Tests
A result, via an assertion	1,199
That no error is raised, and nothing else	41

They count in coverage, they count in the number of tests, and they give the feeling that the function is tested. A team seeing "covered" does not rewrite the test.

What the agent does, and does not

Action	Done?	Why
--------	-------	-----

Mark them "no result assertion"	Yes	The defect becomes visible
Take them out of published coverage	Yes	The figure becomes honest again
Delete them	No	They still check that the code runs
Write the missing assertions	No	With no source, that would carve current behaviour in

Coverage	Value
Displayed	87%
Excluding assertion-free tests	79%

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
