Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **None of the four findings concerns a failing test** — it is the green tests that are the problem.

#	Finding	What triggered it	At stake	Recipient	Chase
1	**41 tests with no result assertion**	**Return-value substitution**	**The coverage shown**	**Author or team**	Monthly
2	**7 flaky tests, 312 reruns**	**Run log**	**A possible real defect**	**The team, never a person**	Monthly
3	**3 payment modules at 12%**	**Coverage by module**	**What breaks most**	**Whoever sets priorities**	Monthly
4	**34 changes with no test**	**Branch history**	**Unverified behaviour**	**On the branch, before merge**	**Before merge**

What makes a green suite mean something

What the agent holds	What you gain
A test is written from the specification, not from current behaviour	**The 41 tests with no result assertion go back to their author: a test written on the existing code turns every defect into expected behaviour**
A failing test stays red	**The 7 flaky tests and their 312 reruns are isolated and dealt with: rerunning until green always ends up letting a real defect through**
Coverage is given per module	**The 3 payment modules at 12% stand out; an overall rate would have drowned them, and that is exactly where things break**
Disabling a test is a decision, and it is dated	**A test switched off never switches itself back on: the agent proposes the 23 re-enablements one at a time, with what each one brings to light**
Gaps are counted per module, never per person	**The moment a per-person counter exists, tests get written for it; the 34 changes with no test are raised on the branch, before the merge**

> **Request a demo with your own documents**
>
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
