Document issued on 24/09/2026

Fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **No fraud is alleged**. The most common cause is mundane: an invoice reissued after a chase, without the first being cancelled.

Element	Invoice A	Invoice B	Identical?
Number	F-2026-0412	F-2026-0455	No
Date received	12/07/2026	23/07/2026	No
Subcontractor	Ombelys Conseil (fictional)	Ombelys Conseil (fictional)	Yes
Timesheet	TS-2026-118	TS-2026-118	Yes
Month of time and materials	06/2026	06/2026	Yes
Net amount	€8,400.00	€8,400.00	Yes
Detail lines	4 lines	4 identical lines	Yes

A check on the invoice number sees nothing, and eleven days apart is enough for a sole accountant not to connect the two. It is the combination of timesheet + month of time and materials + amount that identifies them.

Comparable cases over twelve months

Situation	Cases	Amount
Caught before payment	3	—
Paid twice	6	€31,200
of which since recovered	4	€19,800
of which not recovered	2	€11,400

What is proposed

Action	Detail	What you gain
Message to the supplier	Which of the two to cancel?	The right invoice stays due, the other is cancelled by mutual agreement
Hold on the second	Until an answer	No double payment, and nothing to claw back afterwards

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
