Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **The first flag is about the report itself.**

#	Flag	What triggered it	Recipient	Chase
1	3 opens out of 47 sendings	Report history	Whoever commissions the report	Monthly
2	9 sources, 1 wire story	Text comparison	Flagged inside the report	—
3	1 source empty since 12 April	Gap from usual rhythm	Whoever manages the source list	Monthly
4	2 themes with no source at all	Declared vs present themes	Domain lead	Quarterly

Five points that make a watch report readable — starting with the 9 sources that were only one

The point	The rule
Predict a development	I report what has been published
Infer an intention from a run of articles	Three articles can come from one press officer
Summarise a partly-read article	A summary from a standfirst is false
Reproduce an article	Three lines at most, then the source
Show a read rate per person	The problem is the format

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
