Technical framework — where your exchanges travel

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Local inference, processing in the EU targeted, 2 mandates in force · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for the demonstration. **An agent acting in five tools sees a company's negotiated prices, its margins and its client list go by.** This document says where that data lives, who has access to it, and what the company can state to its contracting clients.

The two deployment modes, at the company's choice

Mode	Where the computation happens	What leaves the network	For whom
Local inference	**On a machine in the workshop**	**Nothing**	Companies already hosting their own ERP
Isolated resource	Dedicated server hosted in France	**Nothing outside the European Union**	Companies that would rather not administer a machine

Local inference means the model computes on the company's own machine: a part number, a supplier's negotiated price or a client's name crosses no outside network to be processed. **In both modes the resource is dedicated:** no pooling with another installer, nor with another contracting client.

The six points, and what each lets the company state

Point	Implementation	What the company can state
Training	**No data feeds a public model**	“Our negotiated price lists serve only us”
Encryption	In transit and at rest	“A file taken out of context stays unreadable”
Role-based access	**Narrower than the users' — no access to the ERP's payroll module**	**“The agent sees less than our own staff”**
Log	**Who asked for what, when, with what result and on whose authority**	“Every action can be found again”
Hosting	**France, under French law, architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity**	**“processing in the EU targeted”**
Committing actions	**Written mandate or validation point, without exception**	“0 committing actions outside a mandate across 5,292 runs”

What it is worth commercially

Finding	Value	Effect

LINDBERGH FORMATION — Blue Lemon Agent — Companies register (RCS) Évry 817 946 114 —

Contracting clients requiring hosting within the European Union	**2 framework contracts in force**	**A food-retail buying group and the central kitchen of a hospital**
Last institutional-catering tender	**Scored criterion**	**Box ticked without reservation, with the evidence to back it**
Technical sheet asked for at renewal	Once a year	**Used to take three days to hunt down; now kept up to date continuously**

What the technical sheet contains

Section	Content
Hosting	Mode chosen, location, applicable law
Subprocessors	List and role of each
Retention periods	Action log, documents, reports
Access	Rights matrix, tool by tool
Mandates in force	**Mandate no. 1 (purchasing, €400, review on 30 September) and mandate no. 2 (quotes, €900, review at six weeks)**

> **The list of mandates is part of the technical sheet, just as much as hosting is.** A contracting client who asks where its data lives will sooner or later ask what the agent is authorised to do in your name — and the answer must fit on one dated line.

For the owner to set

Deployment mode chosen (local inference / isolated resource): _____

---

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
