

What you keep

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 24/09/2026

Eleven months · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **A blind replay rewrites what was already written.**

Item	Kept?	What it allows
Each write's identifier, source and target	Yes	Finding and undoing
Timestamp	Yes	Reconstructing the order of events
Result returned by the target system	Yes	Knowing whether the write landed
Incomplete operations and their exact stopping state	Yes	Resuming without doubling
Divergences between systems, with both values	Yes	Having whoever decides decide
Interruptions and their cause	Yes	Telling an outage from a quota

Item	Kept?	What it allows
Content carried	No	The agent carries, it does not store

Why the exact stopping state is the most useful item

The **41 half-written operations** could not be resumed without that detail — **which is why they had stayed as they were.**

What never crosses, whatever the setting

Item	Crosses?	Reason
Free-text fields and comments	No	The destination has different entitlements from the source

It is not a matter of trust: a free-text field contains what nobody anticipated, and carrying it makes it visible to people who had no access to it.

Behaviour on outage

Finding	Value
Interruptions over eleven months	7
Causes	Unannounced maintenance, call quota reached, network outage
Automatic resume	No — it would double the partial writes

For the company to settle

Retention period for the write log: _____ months

Person alerted on interruption: _____

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
