Reversible writing — the three conditions

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Four systems · fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for demonstration. **The conditions are technical, not moral: a creation is an act you do not come back from if they are not met.**

The three conditions of an open write

Condition	What it makes possible
The write carries its source identifier	**Finding and undoing**
The matching deletion exists	**Going back**
An identical replay creates no duplicate	**Replaying without damage**

What the agent writes alone once the conditions are met

Case	Volume recorded	State before

Resuming operations left half written	**41**	**First system accepted, second refused, the gap showed in no log**
Creations whose source identifier is kept	**—**	**—**
Updates whose source governs unambiguously	**—**	**—**

What still escalates, even with writing open

Situation	Volume	Why
Two systems carry a different price	**3 % of shared references**	**Choosing means deciding a price**

Both values are escalated **with their last-modified dates.**

What was stopped without asking

Finding	Value
Writes produced	**1,400**
Real changes	**12**
Cause	**Two systems answering each other, each believing it received something new**

For the company to settle

Governing system per field family: _____

---

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
