

Thirty-eight duplicates — one cause

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 24/09/2026

Fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **All 38 turn on one optional field**, which means they are fixed by a setting and not by surveillance.

When the duplicates appear

Moment	Duplicates this month
Handover between departments	38
Initial creation	0
Data migration	0
Other	0

The sequence

Step	What happens	Why
------	--------------	-----

1	Department A creates the record	Without the external identifier — it is optional
2	Department B looks for the record	On the external identifier — the only one it knows
3	Department B finds nothing	The record exists, but not under that field
4	Department B recreates the record	Two records, two histories

Neither department makes a mistake. A fills in what is asked, B searches on the only field it knows. It is the field being optional that produces the 38, not the officers.

The two ways to fix it

Option	Effect	Nature
Flag each duplicate as it is created	38 flags a month to handle	A plaster
Make the external identifier mandatory	All 38 disappear	A setting

The second option is not the agent's to take: making a field mandatory slows a creation and can block a legitimate case. Weighing that is the department's — the agent's role was to show that 38 monthly duplicates turn on one tick box.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
