Fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **The defects flagged almost always come from time passing, not from carelessness.** A 2021 order whose citation went stale in 2023 was well drafted in 2021.

Item	Kept?	Why
The draft produced	Yes	Retracing the path
The acts its citations and wordings come from	Yes	Checking a provenance
The date	Yes	Chronology
What became of it	Yes	Published, amended or dropped
Statistics per drafter	No	Defects come from time, not from people
Individual rework rate	No	Same reason

Item	Kept?	Why
Comparison between departments	No	Unrelated to the quality of the texts

What the quarterly summary contains

Content	What it indicates
Types of defect encountered	Where rereading pays
Acts that age fastest	Those citing frequently amended legislation
Acts not reread for N years	A rereading calendar

The second row is the one that serves most. An act citing legislation amended three times in five years goes stale quickly; an act citing only local resolutions goes stale when those resolutions change, and not before.

To be set by the authority

Retention period for drafts and their sources: _____ months

Rereading interval for the most exposed acts: _____

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
