

Thirty-four per cent corrected, no version kept

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 24/09/2026

1,460 reports · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **In the vast majority of cases, the agent is the one that got it wrong.**

Stage	What exists
Pre-fill	The agent's proposal
Reading and correction	The proposal and the correction
Validation	The report alone — the proposal disappears

Why the proposal does not survive

If it were kept	What would follow
A machine / declaration gap would exist	It would be consultable

If it were kept	What would follow
It would be comparable between people	It would end up being looked at
It would mean nothing	The agent's error rate would become somebody's correction rate

Actual causes of the gaps

Cause	Whose fault?
Meeting cancelled without being deleted	The agent's
Document opened for two minutes	The agent's
Task done leaving no trace	The agent's

What is kept	Value
Overall correction rate, no names	34%
Correction rate per person	Never

One line in three proposed is wrong: that is the agent's quality measure, not the teams'.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
