Automatic sending — and why approval has an author

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Fictional document

> **Fictional document — demonstration example**
> This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

> **Fictional document**, produced for demonstration. **An approved timesheet triggers billing and stands behind what was done.**

What the agent does alone once the timesheet is approved

Act	Done alone?	Rhythm
Sending to the client	**Yes**	**The one you set**
Passing to billing	**Yes**	**Immediate**
Chasing missing timesheets	**Yes**	**Day 2 then day 5**
Monthly recap by engagement	**Yes**	**Monthly**

The one act that stays with a person

Act	Why
Approval	**Whoever approves declares the time described is the time spent — a declaration has an author**

The time gain

Step	Today	After
Wait between approval and sending	**6 days on average**	**Immediate**

> On monthly billing, **six days of lag become a whole month** when approval lands after the cut-off.

What is not spread pro rata

Finding	Value	Treatment
Time fitting no engagement	**12 %**	**"Unallocated" line, made visible**

Spreading pro rata produces **false figures that look exactly like accurate ones** — and the client pays them.

For the company to settle

Sending rhythm to the client: _____

Chaser days for missing timesheets: _____

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
