Technical framework — where your unpublished content lives

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 09/11/2026

Local inference, role-based access, processing in the EU targeted · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for the demonstration. **It describes the architecture actually offered.** An embargoed release, a test report and a visit report are the most sensitive documents an industrial company entrusts to a writing tool.

The two deployment modes, at the company's choice

Mode	Where the computing happens	What leaves the network	For whom
Local inference	**On a machine at the plant**	**Nothing**	Companies that already host their file server
Isolated resource	On a dedicated server hosted in France, under French law	**Nothing outside the European Union**	Companies that would rather not administer a machine

In both cases the resource is dedicated to your brand. No pooling with another manufacturer. **None of your documents trains a model**: what the agent learns from Hydralis serves Hydralis, and nothing entrusted to it can surface elsewhere, because nothing goes there.

What is protected, and what it reveals to whoever reads it

Document	What it reveals	How it is held
Embargoed release	**Your commercial roadmap, six weeks before the announcement**	Encrypted, access limited to the marketing manager and management
41 recent test reports	**Measurements your competitors do not have**	Role-based access: out of the apprentice's reach
340 visit reports	Your customers, their installations, their objections	Same perimeter, never copied outside the network
Content being drafted	What you are preparing, before anyone else	Logged, never transmitted
The very fact of preparing a launch	**Can be inferred from a simple usage log at a third party**	**No usage log leaves the company**

What the agent plugs into — without migration

Tool already in place	What the agent does there	What changes for the team
File server	**Indexes the content of the 6,400 documents**	**No renaming, no moving**
Catalogue PIM	Reads the characteristics of the 340 references	Nothing: read-only
Site content manager	**No write access**	**Publication stays manual, by marketing**

LINDBERGH FORMATION — Blue Lemon Agent — Companies register (RCS) Évry 817 946 114 —
Legal notice (in French): bluelemonagent.ai/mentions-legales

Tool already in place	What the agent does there	What changes for the team
Emailing tool	**No write access**	**Sending stays with marketing**

What the company can answer, with no preparation

Question asked	Answer available on one page
Where is our unpublished content hosted?	**100 % in France, under French law**
Which sub-processors outside the EU?	**None. Zero data outside the European Union, architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity**
Do our documents train a model?	**No, none**
Who can see the test reports?	The engineering office and the marketing manager; not the apprentice
How many pieces published without a human?	**Zero — the agent has no write access to the site**

> **The argument is commercial as much as technical:** two 2026 public tender rules scored data hosting out of 5 points, and the framework contract of the food-processing customer in Nantes prohibits any transfer outside the European Union, **including for a writing tool**. The box is ticked with no reservation and no clause to negotiate.

For the company to set

Deployment mode retained (local inference / isolated resource in France): _____

---

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
