Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **It is not the agent that gains access: it is the message that changes destination**, at the request of whoever is leaving.

Situation	Messages
Arrived in a personal mailbox during an absence	218
After forwarding: arrived at the service address	174
Still arriving personally	44

The 44 wait, and that is normal: their sender is writing to the person, not to the department. An arrangement that captured those too would do exactly what the scope forbids.

What refusing access to personal mailboxes costs

Situation	Consequence	Accepted?
A client writes to a salesperson on leave	No faster reply	Yes
An important message waits	It waits for the person	Yes

What is proposed instead of access

Element	Written by
Automatic forward during absence	The person themselves
To a service address	—
Binding requests arrive at a service address	An organisational rule

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
