Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **All four flags precede any automation.**

#	Flag	On what	Handling
1	**41% of cases pass through an unwritten step**	**4,200 cases observed**	**Described before being touched**
2	**60% standard cases, 17 variants**	**3 processes**	**The 40% taken out at the first step**
3	**Entry gain lost again in checking**	**End-to-end time**	**Flagged before go-live**
4	**3 steps with no explanation**	**Written procedures**	**Not automated**

Five guarantees that make the promised gain show up in your accounts

What the agent rules out	Why
Automate a step where somebody decides	**The agent prepares, the decision stays**
Automate a step not understood	**An informal check is a judgement**
Close the manual route	**On the day of the breakdown, somebody must know**
Announce one step's gain as the process's	**A figure that will never be found again**
Measure people	**The observed process would cease to exist**

> **Request a demo with your own documents**
>
> This document is a fictitious example. To see the agent work on your own documents, request a demo from its page.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
