

612 questions this quarter

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 24/09/2026

541 sourced · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **The 71 unanswered are not presented as a failure rate.** A tool that hid them to improve its answer rate would render the opposite service to the one it is asked for.

Situation	Questions	Share
Sourced answer, with procedure and date	541	88%
Answered with "I don't know"	71	12%
Total	612	100%

How an answer is worded

Element	Present?	Example
The procedure cited	Yes	Procedure of 14/03/2026
Its date	Yes	14/03/2026
The exact point	Yes	Point 4.2

Element	Present?	Example
The passage	Yes	"passed within three working days..."
A rewording with no source	No	—

The date matters as much as the answer. A 2019 procedure and a March one are not quoted the same way, and an officer who reads the date knows whether to check.

When two documents say different things

What the agent does	Done?
Give both	Yes
Give their dates	Yes
Say which is more recent	Yes
Say which applies	No

A recent procedure does not always repeal an older one. Deciding on the department's behalf would be exactly the kind of service one does not render: it would look like efficiency and carry the weight of a decision.

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
