

Technical framework — where your documents live

LINDBERGH FORMATION — 16 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114

Document issued on 24/09/2026

France, isolated resource, read-only · fictional document

Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for the demonstration. **It describes the architecture actually offered.** A document platform concentrates the written assets of the company: governing it is a security requirement, not a stylistic clause.

The two deployment modes, for the IT department to choose

Mode	Where computation happens	What leaves the network	For whom
Local inference	On a machine belonging to the company	Nothing	Companies that already host their own servers
Isolated resource	On a dedicated server hosted in France	Nothing outside the European Union	Companies that would rather not administer a machine

In both cases the resource is strictly dedicated. No pooling with another company, nor with another document base: your procedures, your drawings and your production run files live in an environment that is yours alone.

The eight points your auditors look at

Point	Implementation	What you can write to a customer
Training	None of your documents trains a model	"What the platform learns from our base serves our base"
Writing into sources	None — read-only across the 9 sources	"No document can be modified by the platform, not even by mistake"
Encryption	In transit and at rest	"An intercepted file stays unreadable"
Role-based access	Rights follow the function, not the person	"Only the roles named in the contract open your files"
Logging	Consultations, exports, access decisions	"We produce a dated record, not a statement"
Hosting	France, under French law, architecture designed to reduce exposure to extraterritorial legislation, location alone not being enough to guarantee immunity	"Your data is processed within the European Union in the architecture chosen"
Isolation	Dedicated resource, no pooling	"Your base sits next to no other company's"
Decisions	No access opened, no version published without a written decision	"Governance stays ours"

What that is worth, in figures

LINDBERGH FORMATION — a simplified joint-stock company with share capital of €250,000 · Registered office: 10 rue de Maillé, 91310 Montlhéry, France · Companies register (RCS) Evry 817 946 114 · SIRET 817 946 114 00029 · VAT FR 60 817 946 114 · "Blue Lemon Agent" trade mark · Training-provider registration no. 119 108 635 91 (Île-de-France prefect — this registration does not amount to State approval) · Qualiopi certified, no. 03896, for the "training actions" category · contact@bluelemonagent.ai · dpo@bluelemonagent.ai · Hosted in France.

Fact	Value
Customers imposing hosting in France in their framework contract	4 out of 6
Customers requiring a consultation log	3 out of 6
Questions of the last audit questionnaire covered by this document	34 out of 38 — the remaining 4 are your retention periods
Data transfers outside the European Union, over the half-year	0
Documents modified by the platform, out of 214,000	0

For executive spaces, employee data and documents covered by professional secrecy, reinforced hosting options exist according to your level of requirement. A single architecture is designed to answer both the GDPR and extraterritorial exposure.

For the IT department to settle

Deployment mode chosen (local inference / isolated resource): _____

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
