Fictional document — demonstration example

This document is produced by the Blue Lemon Agent website to illustrate what an AI agent hands to its users. The companies, matters, amounts and people in it are invented. It has no legal, accounting or commercial value.

Fictional document, produced for demonstration. **No similarity percentage is produced.** "87%" does not say what is missing; "two different first names" makes someone open the file.

The weight of each signal

Signal	Weight	Sufficient alone?	Why
Shared identifier	**Decisive**	**Yes**	**Assigned, unique, not guessed**
Improbable combination of fields	Strong	No	Improbable is not impossible
Cross-reference between the rows	Strong	No	One row cites the other
Name alone	**Almost none**	**No**	**Two people can share it**

Signal	Weight	Sufficient alone?	Why
Address alone	**Almost none**	**No**	**One household, several people**
Date of birth alone	**Almost none**	**No**	**1 chance in 365**

The result across the 18,400 rows

Situation	Rows	Next step
Matched on a shared identifier	**1,144**	No action
Matched with at least one divergence	**96**	**Human decision**
Unmatched	17,160	See the files' perimeters

> **What matters is not how many matches were found, but how many decisions remain to be taken.** 18,400 rows become 96 cases, and a figure of 1,240 matches would be worthless if all 1,240 had to be reread.

What each presented match carries

Element	Provided?
Agreeing fields	**Yes**
Diverging fields	**Yes — with equal care**
What it would take to decide	**Yes**
Similarity percentage	**No — deliberately**
Ability to merge	**No — never**

---

Scope of this document: the service operated by Blue Lemon Agent. For an agent deployed at your premises, the applicable location is that of the architecture set out in the quotation and verified before commissioning; local execution is announced only for the configuration explicitly described and accepted in the quotation; the applicable isolation depends on the deployment mode set out in the quotation, no dedicated isolation being presumed; the encryption mechanisms in transit and at rest, their components and key management are those documented for the architecture chosen; roles and permissions are configured and accepted for the identities and systems actually connected; the events logged, their content, their retention period and who may access them are defined for the deployment chosen.
